Re: Beryl/Enterprise Dist. Sys.
Inoperative Meters

Dear Mr. Laub:

Mr. Clair Hunt, the Water Commissioner for the Beryl-Enterprise Distribution System has informed us that the water meter(s) on your pumped well(s) are not operating correctly. Mr. Hunt informs us he has discussed this problem with you or the people leasing water from you, but the meter(s) have not been fixed or replaced.

Section 73-5-4 of the Utah Code Annotated, 1953, as amended states in part:

"Every person using water in this State shall construct or install and maintain a substantial head-gate, cap, valve or other controlling works, weir flume and measuring device at each point where water is diverted or turned out, for the purpose of regulating and measuring the quantity of water that may be used."

Therefore, you are hereby ordered to replace or to make the necessary repairs on your meter(s) prior to the beginning of irrigation in 1990.

The repairs or replacement of the meter(s) must be inspected and verified by Mr. Hunt. If irrigation is attempted in 1990 without functional water meter(s), agency action will be commenced to prohibit your use of water until the meters are repaired or replaced.

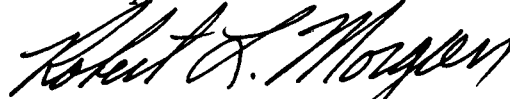

The proper operation of meters is extremely important to the proper regulation of water use in your distribution system and we urge you to have your meter(s) repaired or replaced as soon as possible.

Letters were sent to everyone on the attached list.
